

Nairobi 2026: AXIS and the Africa of sovereign systems

The software has changed — In Nairobi, Africa is no longer thought of through aid but through infrastructure, platforms, data and sovereignty.

Sovereignty becomes circulation — Ports, fiber, payments and energy are emerging as the new power architectures of the continent.

Invisible infrastructures — Digital payments, cloud, cybersecurity and artificial intelligence are becoming as strategic as roads or dams.

AXIS as a sovereign architecture — MACC Pay, WorldKYC and FraudTrack are designing an African infrastructure for the governance of flows, transactions and data.

Resources are becoming programmable — Mines, carbon, forests and agriculture are now tending to be integrated into digital systems for traceability and value circulation.

Towards an Africa of systems — Nairobi reveals the emergence of an Africa of sovereign platforms, where power will depend on the mastery of data, payments and invisible infrastructures.

From the Africa of resources to the Africa of systems
